

Early miscarriages

Interviews with women affected by miscarriages within the first 12 pregnancy weeks

12/2022 – 02/2023

Initiator

Wiener Programm für Frauengesundheit

Objectives

Both women concerned and experts advocate new ways of handling (early) miscarriages and their consequences. However, the issue is still a taboo in our society. Media coverage of early miscarriages may contribute to more awareness, openness and exchange on the issue. The Wiener Programm für Frauengesundheit therefore prepared an awareness project that aimed to empower women with reliable information and to free the issue from taboos. The major target group were women who experienced early miscarriages. Secondly, the project also raised awareness in the general public.

Interviews with women concerned complemented the information gained from interviews with experts (midwives, gynaecologists, psychologists). The aim of the interviews was to find out about the wishes and support needs of the women. The results were used to properly plan and carry out the awareness project.

Implementation

Together with the Wiener Programm für Frauengesundheit, queraum developed the semi-structured interviews. 13 women who experienced early miscarriages were interviewed about their experiences and possibilities to improve the situation for women in similar situations. The results were summarized in a final report.
