

ACTIVE-HEALTHY to Kindergarden and School

09/2017 – 08/2019

Initiator

Universität für Bodenkultur Wien

Objectives and activities

The project “ACTIVE-HEALTHY to Kindergarten and School” was set up to develop the programme “Active and healthy mobility management for Viennese Kindergartens and Schools”. The Institute for Transport of the University of Natural Resources and Life Sciences collected and evaluated existing information and awareness raising provisions for the active mobility of children and young people in Vienna. Based on the results, the project team developed qualitative standards and evaluation methods for future provisions of mobility management in kindergartens and schools and carried out analysis of selected pilot projects. The results of both project steps were the basis of the programme “Active and healthy mobility management for Viennese Kindergartens and Schools”.

Implementation of the evaluation

queraum was responsible for the process evaluation and supported the project team continuously in the implementation of the work packages (Objectives Clarification Workshop, Exchange and Reflection Workshops). Target achievements, experiences and the results of the external evaluation that focused on the optimization of the programme were reflected upon in a final workshop. In addition, the evaluation team interviewed stakeholders in active mobility at two points in time to collect information and perspectives to support the project team in its approach and the development of the programme. Furthermore, the queraum team supported the project team in the realisation of two experts’ meetings.
